Supporting information: GASS-low data release

We present here the full data release of GASS-low, the low mass extension of GASS, which includes new Arecibo observations of 208 galaxies.

Table A1 lists optical and UV quantities for the GASS-low galaxies, ordered by increasing right ascension. Tables A2 and A3 present the measured HI parameters and upper limits for the 120 detected galaxies and 88 non-detections, respectively, ordered by increasing right ascension. The content of these catalogs is explained in detail in Appendix A of the paper.

Figures A1 and A2 show SDSS images and Arecibo HI-line spectra of GASS-low detections and non-detections, respectively. The objects in each figure are ordered by increasing GASS number (indicated on the top right corner of each spectrum). The SDSS images show a 1 arcmin² field, i.e. only the central part of the region sampled by the Arecibo beam (the half-power full width of the beam is $\sim 3.5'$ at the frequencies of our observations). Therefore, companions that might be detected in our spectra typically are not visible in the postage stamps, but are noted in Appendix B of the paper. The HI spectra are always displayed over a 3000 km s⁻¹ velocity interval, which includes the full 12.5 MHz bandwidth adopted for our observations. The HI-line profiles are calibrated, smoothed (to a velocity resolution between 5 and 15 km s⁻¹ for the detections, as listed in Table A2, or to 15 km s⁻¹ for the non-detections), and baseline subtracted. A red, dotted line indicates the heliocentric velocity corresponding to the optical redshift from SDSS. In Figure A1, the shaded area and two vertical dashes show the part of the profile that was integrated to measure the HI flux and the peaks used for width measurement, respectively.

Table A1: SDSS and UV parameters of GASS-low galaxies

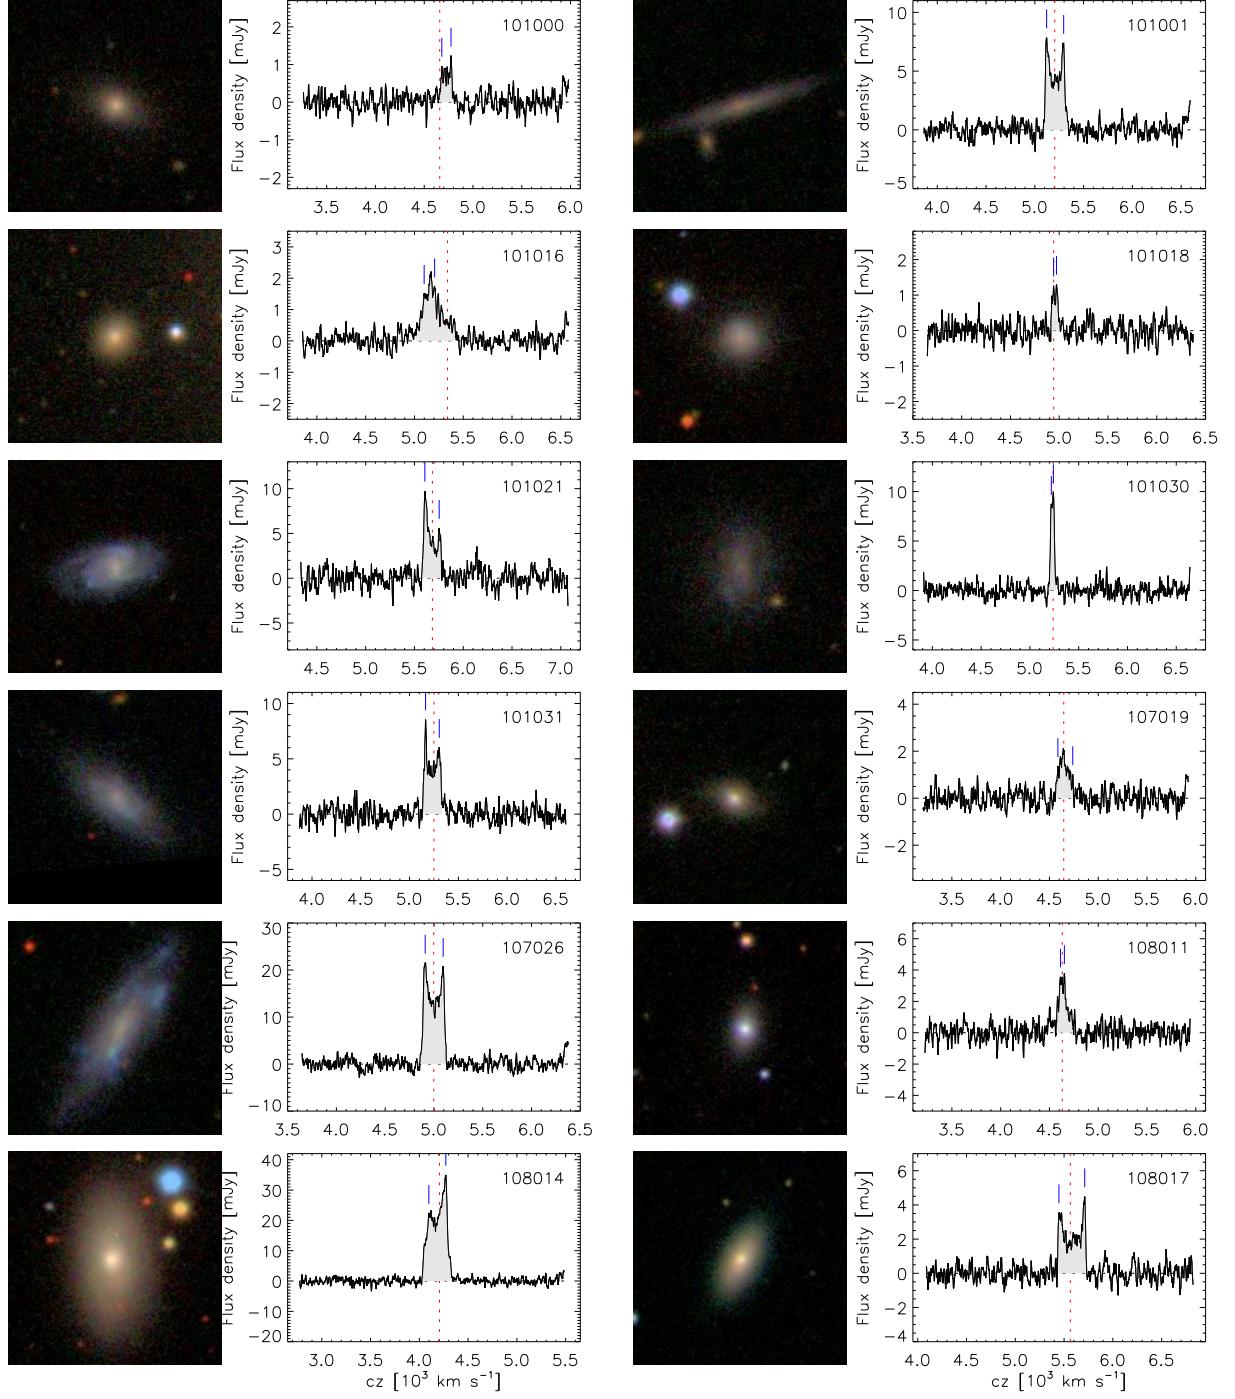

Figure A1: SDSS postage stamp images (1 arcmin^2) and HI-line profiles of GASS-low detected galaxies, ordered by increasing GASS number (indicated in each spectrum). The HI spectra are calibrated, smoothed and baseline subtracted. A dotted line and two dashes indicate the heliocentric velocity corresponding to the SDSS redshift and the two peaks used for width measurement, respectively.
